

```
CREATE TRIGGER trg_EmployeeDelete
ON employee
FOR DELETE
AS
BEGIN
    INSERT INTO AuditLog (employee_id, Action)
    SELECT emp_id, 'Employee Deleted'
    FROM deleted;
END;
```

EXPLANATION:

1. **ON employee** - Specifies the table the trigger is attached to
2. **FOR DELETE** - Fires the trigger after a DELETE operation completes
3. **DELETED** - A special virtual table that contains the rows being deleted
4. **SELECT emp_id, 'Employee Deleted'** - For each deleted row, logs the employee ID with the action description

HOW TO TEST IT:

sql

```
-- Delete an employee
DELETE FROM employee WHERE emp_id = 1;

-- Check the AuditLog table
SELECT * FROM AuditLog;
```

Result:

employee_ id	Action
1	Employee Deleted

IMPORTANT NOTES:

- The trigger handles multiple row deletions (batch deletes) by using **SELECT** from the **DELETED** table

- If you delete multiple rows at once, all of them will be logged
- Example of batch delete:

sql

```
DELETE FROM employee WHERE dept = 'IT';
```

This would log all IT employees who were deleted

- If you want to combine both INSERT and DELETE logging in one trigger, you can use:

sql

```
CREATE TRIGGER trg_EmployeeAudit
```

```
ON employee
```

```
FOR INSERT, DELETE
```

```
AS
```

```
BEGIN
```

```
-- Log inserts
```

```
INSERT INTO AuditLog (employee_id, Action)
```

```
SELECT emp_id, 'Employee Created'
```

```
FROM inserted;
```

```
-- Log deletes
```

```
INSERT INTO AuditLog (employee_id, Action)
```

```
SELECT emp_id, 'Employee Deleted'
```

```
FROM deleted;
```

```
END;
```
