

```

CREATE FUNCTION get_grade(salary DECIMAL(10,2))
RETURNS VARCHAR(1)
DETERMINISTIC
BEGIN
    DECLARE grade VARCHAR(1);

    IF salary <= 10000 THEN
        SET grade = 'D';
    ELSEIF salary <= 30000 THEN
        SET grade = 'C';
    ELSEIF salary <= 60000 THEN
        SET grade = 'B';
    ELSE
        SET grade = 'A';
    END IF;

    RETURN grade;
END;

```

Query to get expected output:

sql

```

SELECT
    first_name,
    salary,
    get_grade(salary) AS Grade
FROM employee;

```

Sample output:

text

first_name	Salary	Grade
Rahul	56000	B
Pravin	25000	C
Naresh	8000	D

QUESTION:

Write a function to assign grades to employees based on their salary:

Range Grade

0-10000 D

10000-30000 C

30000-60000 B

Above 60000 A

Refer to previous assignment for employee table schema and assume suitable data.

Expected Output

first_name	Salary	Grade
------------	--------	-------

Rahul	56000	B
-------	-------	---

Pravin	25000	C
--------	-------	---

Naresh	8000	D
--------	------	---
