

Here's the complete Java program as requested:

java

```
// Student.java
class Student {
    // Data Members
    int rollNum;
    String studName;
    double mark1, mark2, mark3;
    double totalMarks;

    // Method to set student details (except totalMarks)
    void setStudentDetails(int rn, String name, double m1, double m2, double m3) {
        rollNum = rn;
        studName = name;
        mark1 = m1;
        mark2 = m2;
        mark3 = m3;
    }

    // Method to calculate total marks
    void calculateTotal() {
        totalMarks = mark1 + mark2 + mark3;
    }

    // Method to display rollNum, studName and totalMarks
    void displayStudDetails() {
        System.out.println("Roll Number: " + rollNum);
        System.out.println("Student Name: " + studName);
        System.out.println("Total Marks: " + totalMarks);
    }
}

// StudentDemo.java - Test class
public class StudentDemo {
    public static void main(String[] args) {
        // Create Student object
        Student s1 = new Student();

        // Set student details
```

```
s1.setStudentDetails(101, "Rahul Sharma", 85.5, 90.0, 78.5);

// Calculate total marks
s1.calculateTotal();

// Display student details
s1.displayStudDetails();

// Create another student object
Student s2 = new Student();
s2.setStudentDetails(102, "Priya Verma", 92.0, 88.5, 95.0);
s2.calculateTotal();
s2.displayStudDetails();
}
}
```

Output:

text

Roll Number: 101
Student Name: Rahul Sharma
Total Marks: 254.0

Roll Number: 102
Student Name: Priya Verma
Total Marks: 275.5
