

What is ReactJS and why is it used?

ReactJS is a JavaScript library for building user interfaces, developed by Facebook. It is used to create dynamic and interactive single-page applications efficiently by managing the view layer for web and mobile apps.

What are the main features of ReactJS? What is the meaning of the term SPA?

Its main features include the Virtual DOM for performance, JSX syntax, and reusable components. SPA stands for Single Page Application, a web app that loads a single HTML page and dynamically updates content without full page reloads.

What are React components and their types?

React components are independent, reusable pieces of code that return HTML via a render function. The two main types are **Class Components** (using ES6 classes) and **Functional Components** (simpler functions that can use Hooks for state).
