```

How Age Calculation Works

The `calculateAge` function dynamically determines each person's age based on the current date. Here's what you'll see:

- **Person List:** Each person's name and date of birth are displayed in a clean row.
- **Dynamic Age:** Next to each person, you'll see their age in years. This number is calculated by comparing their birth date to your system's current date.
- **Accurate Logic:** The calculation accounts for whether the birthday has already occurred this year to ensure the age is correct.

Person Details [age calculator]		
✂ name	· date of birth	· dynamic age
current date used: Mar 1, 2026		
John Doe	1990-01-15	36 years
Jane Smith	1985-05-20	40 years
Alice Johnson	1995-09-10	30 years
✓ calculateAge: (dob) => age based on today
