

File Upload Handling in React:

Use FormData API to append files and send them via multipart/form-data requests.

jsx

```
const [file, setFile] = useState(null);
const handleSubmit = (e) => {
  e.preventDefault();
  const formData = new FormData();
  formData.append('file', file);
  axios.post('/upload', formData);
};
return <input type="file" onChange={(e) => setFile(e.target.files[0])} />;
```

Dependent Dropdowns in React:

Use useEffect to fetch second dropdown options whenever the first dropdown value changes.

jsx

```
const [country, setCountry] = useState('');
const [cities, setCities] = useState([]);
useEffect(() => {
  if (country) fetch(`/api/cities/${country}`).then(res => res.json()).then(setCities);
}, [country]);
```

Multiple Checkboxes in React:

Maintain an array in state and toggle values by checking/unchecking checkboxes.

jsx

```
const [selected, setSelected] = useState([]);
const handleCheck = (value) => {
  setSelected(prev => prev.includes(value) ? prev.filter(v => v !== value) : [...prev, value]);
};
return items.map(item => (
  <input type="checkbox" checked={selected.includes(item)} onChange={() => handleCheck(item)} />
));
```
