

No, it is not possible to have only a try block without a catch or finally block in Java.

Why?

The try block must be followed by either:

1. **At least one** catch **block**, OR
2. **A** finally **block**, OR
3. **Both** catch **and** finally **blocks**

This is a compilation rule enforced by the Java language.

Examples:

Invalid - Only try block (Compilation Error)

java

```
public class Test {  
    public static void main(String[] args) {  
        try {  
            int result = 10 / 0;  
        }  
        // ERROR: 'try' without 'catch', 'finally' or resource declarations  
    }  
}
```

Compilation Error:

text

```
Test.java:5: error: 'try' without 'catch', 'finally' or resource declarations  
    try {  
    ^
```

Valid - try with catch

java

```
public class Test {  
    public static void main(String[] args) {  
        try {  
            int result = 10 / 0;  
        } catch (ArithmeticException e) {  
            System.out.println("Cannot divide by zero!");  
        }  
    }  
}
```

Valid - try with finally (no catch)

java

```
public class Test {  
    public static void main(String[] args) {  
        try {  
            int result = 10 / 0;  
        } finally {  
            System.out.println("This always executes");  
        }  
    }  
}
```

Valid - try with both catch and finally

java

```
public class Test {  
    public static void main(String[] args) {  
        try {  
            int result = 10 / 0;  
        } catch (ArithmeticException e) {  
            System.out.println("Exception caught");  
        } finally {  
            System.out.println("Cleanup code here");  
        }  
    }  
}
```
